Sterling, VA 20166

Dear Assurety:

The purpose of this letter is to confirm our recent conversation concerning the use of Assurety's Integrated Mailing Solution™ (AIMS™).

To conform, IBM implemented Assurety's Integrated Mailing Solution (AIMS) at United States Postal Service in 2015, and the software is in use today.

The AIMS software supports production and IV&V processes, entry, postage, induction, operations and visibility processes. Some key features are:

- Receiving, validating and uploading of mail and parcel data in the form of Mail.dat
- Merging and splitting of presort data,
- Account management,
- Volume optimization,
- Regeneration of piece, tray/sack and container barcodes,
- Supports appointment management and resource management at the USPS facility docks with Mail.XML data formats,
- Tracking of containers at induction and closeout.

The AIMS software is still in use at USPS in 2018.

Please let me know if you have any further questions.

Sincerely,

A handwritten signature in black ink that reads "Bill Takis".

Bill Takis
